PROJECT IDEA

Fork to farm Fork to farm Fork to farm Fork to farm

- ❖ Green Revolution; cereal productivity, Asia's cereal basket, food security and alleviating malnutrition for the masses.
- ❖ Increasing equity concerns over agriculture-nutrition-health-environment pathways regionally and socio-economically (gender and class).
- ❖ Threats to Green Revolution gains are climate change and productivity stagnation.

Research Aims:

- ❖ To assess the impacts and implications of post Green Revolution Dynamics on agri-nutrition-health-environment pathways due to climate change, food supply chain transformations and cereal productivity stagnation.
- ❖ To identify potential equitable adaptation options to address and overcome these challenges and to derive corresponding policy implications for research and development programmes.
